

İNŞAAT SANAYİ TURİZM VE TİCARET A.Ş.

ENERGY POLICY

We, as Makyol Insaat, aim at proactively implementing an energy management system to effectively manage sustainable development throughout our operations. Accordingly, our primary objective is to become an organization that uses energy and natural resources efficiently, contributes to a low-carbon economy, and continually improves its energy performance.

To achieve this objective, we, as the Senior Management, commit to adhering to the following principles:

Adopt and promote low-carbon practices as part of the fight against climate change,

Focus on the fields of energy efficiency, renewable energy, and circular economy, follow up technological developments in these fields, and direct our investments accordingly,

Comply with the applicable legislation and national and international standards, and fulfill our obligations,

Improve efficiency, prevent waste, and continually enhance energy performance by measuring energy and resource consumption,

Organize training activities to raise employees' awareness of energy efficiency and contribute to their professional development,

Provide the necessary information, resources, and infrastructure required to achieve the objectives established under this Energy Policy,

As the employees of Makyol Insaat, it is our shared responsibility to use energy resources efficiently, mitigate environmental impacts, and fulfill our obligations toward a sustainable future.
